
Race-distance efforts: 1,278 at WBGT 18 °C and over (565 runners), 2,962 under 15 °C (971 runners). Loss = finish time against the fitness prediction (%). ρ = summed loss divided by summed typical heat cost at each effort's WBGT and distance. Held = in-effort cadence change of −1% or better; fell = below −1%. Net row: each group's mean loss at 18 °C and over minus the same cadence group's mean loss under 15 °C, divided by the group's typical heat cost. Runner bootstrap, 1,000 draws.
